Report run: Sun 05 Apr 2026 05:51:26 AM

Upcoming Moon Events

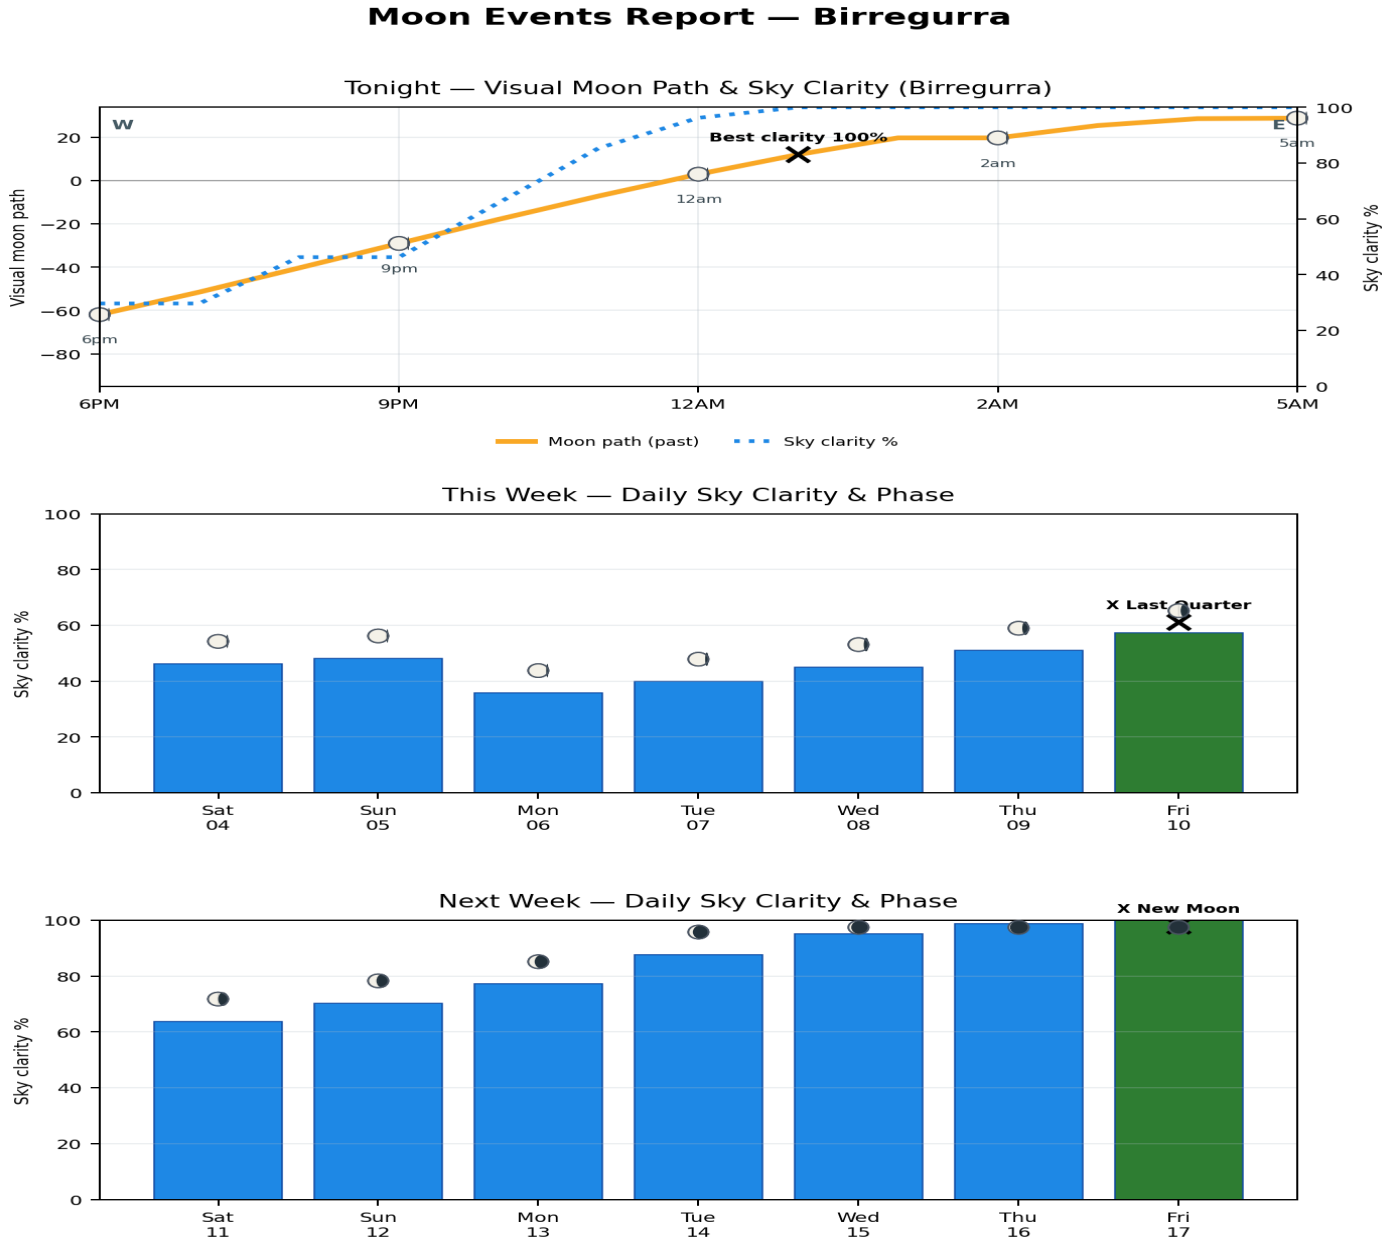
Last Quarter — Sat 11 Apr 2026 12:51 AM: Late-night / dawn moon; darker evenings return.

New Moon — Sat 18 Apr 2026 12:51 AM: Dark-sky window strongest around this phase.

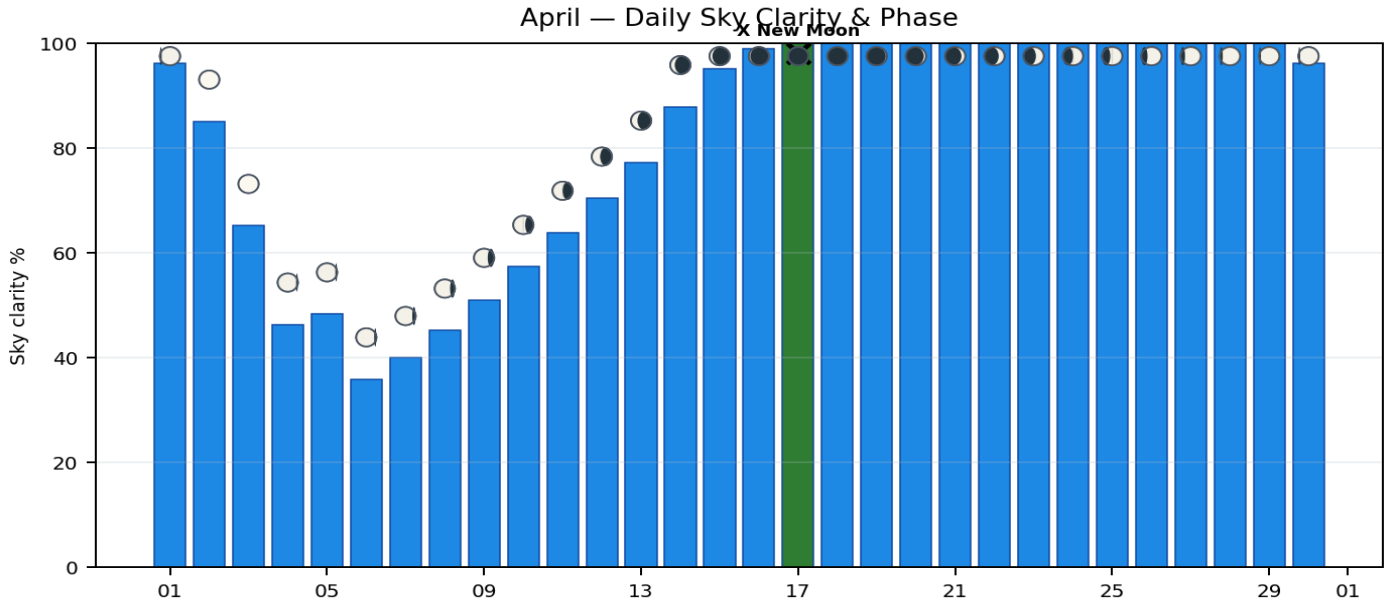
First Quarter — Fri 24 Apr 2026 12:51 AM: Half-lit moon; evening viewing usually improves.

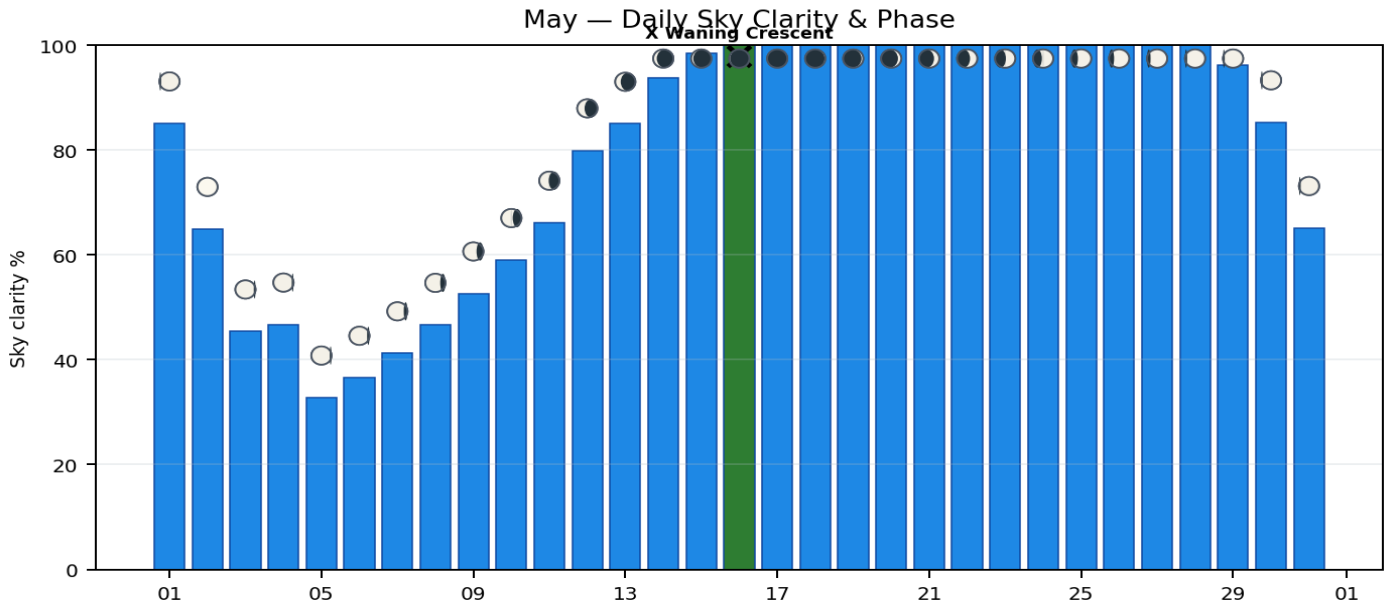
Full Moon — Sat 02 May 2026 12:51 AM: Bright moonlight can reduce dark-sky viewing quality.

Special note — Blue Moon month: two full moons detected (01 Apr and 02 Apr).



Monthly Moon Clarity — Birregurra





How to read the charts

Tonight shows moon altitude and live sky clarity from 6PM to 6AM, with the dotted vertical line marking the exact report run time when it falls inside that night window. The moon path is drawn as solid for elapsed hours and dashed for upcoming hours, with a larger Now marker placed at the exact report run time and 3-hour moon markers retained as the night progresses. W and E labels are included as orientation cues. This week and next week show daily sky-clarity bars with a moon-phase icon above each bar. The monthly charts roll automatically to the current month and next month, with the X marking the best viewing day in each period.
